STATE OF GEORGIA

Department of Agriculture

Fellow Georgians:

Every year, the many facets of agriculture become more difficult and complicated.

The crop farmer, the livestock and poultry producer, forest farmers and all those involved in the agribusiness picture find themselves depending more and more on statistics and information to determine not only where we have been, but where we might be headed.

A continuing escalation in production costs coupled with the every day problems of weather and other crop limiting factors make it imperative today that we not only have such information but that it be accurate and dependable.

The information contained in these agricultural facts is designed to help farmers as well as agribusiness leaders study and evaluate the production of all Georgia's agricultural commodities and perhaps serve as a useful guide to the future success of any agriculture or agribusiness undertaking.

Published by the Georgia Department of Agriculture under a cooperative agreement with the Georgia Crop Reporting Service, Statistical Reporting Service, U.S. Department of Agriculture, this publication is dedicated to the continued growth and expansion of Georgia's agricultural resources.

Sincerely,

Thomas T. Irvin
Commissioner of Agriculture

FOREWORD

The Georgia Crop Reporting Service is pleased to present this 1981 edition of Georgia Agricultural Facts. Published by the Georgia Department of Agriculture under a cooperative agreement, it provides state and county statistics for most major commodities for the years 1975 through 1980. A special feature of selected data from the 1978 U.S. Census of Agriculture, provides frequently requested additional information about Georgia agriculture at the county level.

The year 1980 will long be remembered as a very difficult one by Georgia farmers. A wet spring and extended summer drought played havoc with major crop yields. Livestock prices were sharply below 1979 levels. Production costs rose sharply resulting in the lowest net farm income since records began in 1949.

Farming has changed from a way of life to a way of making a living. Today's agricultural producer is a combination of highly skilled technician and executive who frequently needs to apply more expertise and make more demanding decisions than a manager of a factory or other business.

To operate efficiently, effectively, and profitably, farmers and others in agriculture require accurate information and reliable evaluations concerning production, supplies, marketings, prices, exports, weather and other inputs that make agriculture the Nation's biggest business.

The Crop Reporting Service is a key cog in the information system providing much of the basic statistical data used by producers in making their management decisions. The analysis and interpretation of these basic statistics are performed by others, such as the University of Georgia Extension Specialists, private economists and the producer himself. Our role of providing the basic data is not taken lightly, but every effort within available resources is made to provide an accurate and timely product beginning with survey design and continuing through data collection, summarization, analysis and finally the release of each crop and livestock statistic.

We are indebted to thousands of voluntary reporters from the Georgia farming and agribusiness community. Each one unselfishly gives his time and effort to report various information that relates to his farm and business activities. Without this voluntary cooperation it would be impossible to make reliable estimates or compile this publication. Thanks to all of you who assisted in this effort.

My predecessor, Mr. Frasier Galloway as Statistician In Charge for more than 10 years until his retirement in January 1981, provided the leadership that developed and refined much of the Georgia Crop Reporting Service's information program as we know it today. I wish to express my appreciation for his efforts and wish him well in his retirement. The demand for agricultural facts is increasing and this office will continue the tradition of providing these needed data.

As you review and use this report, please feel free to suggest any changes you believe would improve its future usefulness.

Sincerely,

Larry E. Snipes

Larry E. Snipes
Statistician In Charge

CROPS

HIGHLIGHTS

The 1980 crop year will long be remembered as the year when weather problems turned dreams into nightmares on many Georgia farms. Most will remember that 1980 was a drought year, and such it surely was, but one of the weather problems, strangely enough, was too much rainfall. During the early spring planting season, rainfall was very frequent and heavy. As a result, planting was delayed much later than the optimum planting time which history has shown will produce the most favorable yields. This meant that some crops had to try to set and mature fruit during the part of the growing season that is normally the driest, but in 1980, it was even drier than normal. Production was totally lost from many acres, and was severely reduced for many, many others. Those who were fortunate enough to have irrigation equipment often found that they had to pump so much water to their thirsty crops that the expense ate up most, if not all, of their profit. Some who had the equipment, but were dependent on surface waters, soon pumped their ponds and creeks dry. It was definitely not a good year for most of Georgia's crops.

SOYBEAN YIELD PLUMMETS

After a record high yield the previous year, Georgia's 1980 soybean yield dropped to the lowest level for the past quarter century. The moisture-starved 1980 crop averaged only 12 bushels per acre, compared with 28 bushels per acre for the 1979 crop, and that is only part of the loss story. With the 1979 crop being so favorable, growers expanded their 1980 soybean plantings to a record high 2,450,000 acres. Unfortunately, the crop was so ravaged by dry weather that over 300,000 acres were mostly abandoned. During the growing season, it actually appeared that there would be more abandonment than that, but growers tried to salvage all that they could. They harvested some very low yielding fields, which brought the acres harvested up to 2,140,000, but lowered the average yield. Even with the "salvage harvesting", production in 1980 was less than half the 1979 output, but it was still larger than any other previous year.

PEANUTS HIT 11 YEAR LOW

Dry weather and extremely high soil temperatures combined to restrict peanut production to the lowest level in over a decade. The 1980 yield, at only 1,935 pounds, was the lowest since 1969. Acres harvested, at 514,000, was the lowest since 1973. Were it not for the fact that over half of the crop was under irrigation, the story would have been much sadder. Despite the severe drop in production, Georgia still produced over three times as many peanuts as the next closest contender as the top peanut state. Peanuts contributed about 20 percent of the total value of all crops.

CORN YIELD ALSO DROPS

One of the driest parts of the drought occurred when much of the State's corn acreage was in the ear forming stage. As a result, the average yield dropped 23 bushels, from 65 bushels per acre in 1979 to only 42 bushels per acre in 1980. Early planted corn and those acres that were under irrigation did much to keep the average yield from being lower. Even with the drought damage, corn accounted for a little less than 19 percent of the total crop value.

TOBACCO UP

Tobacco acreage and yield were both higher than the relatively low level of the 1979 crop, but it didn't come easy. The exceptionally wet early spring was ideal for fungus diseases to develop and they did, both in the plant beds and in the transplanted fields. Some acreage drowned and had to be reset. Then, the very high temperatures later in the season affected the quality of the crop. Markets were open longer than for other recent years. With a total crop of 110.6 million pounds, tobacco contributed 14 percent of the aggregate value of all crops.

WHEAT SETS THREE RECORDS

Wheat acreage harvested for grain was more than three times larger than the 1979 crop, to reach a record high 600,000 acres. That was quite a feat considering that those records date back to 1866. The 1980 yield was 2 bushels below the 1979 yield, but still a respectable 33 bushels per acre. This, assured a record production of 19,800,000 bushels, which also more than tripled the previous year. The crop sold for the second highest price ever paid for Georgia wheat and averaged $3.65 per bushel. The total value of the crop was $72.3 million, also more than three times the previous record.

1/ Preliminary.

New Secretary of Agriculture John R. Block recognizes the importance of crop estimates to farmers. Mr. Block signed his first crop report shortly after becoming Secretary. On his left are James Olson, Chairman, Crop Reporting Board, Bill Kibler, Acting Administrator, Statistical Reporting Service and Donald Barrowman, Director Estimates Division.

Includes all numerical variety designations marketed under company name.

FRUIT, NUTS AND VEGETABLES

HIGHLIGHTS

The 1980 crop year was one of many challenges for Georgia's fruit, nut and vegetable producers. Even so, production levels were respectable, and in some cases, remarkable, considering the adverse conditions, especially weather. Spring brought a hard freeze in early March that extended to the Gulf and caught a few varieties of peaches in bloom. This was followed by a period of frequent and heavy rainfall that gave vegetable growers many problems during the spring planting period, but the most memorable part of the 1980 weather was the severe drought that gripped the State throughout the second half of the year.

PEACHES SLIP

Peach production at 120 million pounds, was 15 million lower than the 1979 crop. The early freeze doubtless reduced the extreme south Georgia crop some, but the summer dry weather also reduced the crop by limiting sizing of some of the later maturing varieties. Some harvesting problems were also encountered as the drought caused some varieties to mature at the same time as other varieties. This caused some backlog at packing sheds, but the main problem was the shortage of laborers during the compressed harvesting period. Despite the lower production, the crop had a higher value than the 1979 crop as prices averaged higher than 1979.

PECAN PRODUCTION JUMPS

Despite many fears that the drought would result in a reduced crop of undersized nuts, production jumped 62 percent and totaled 105 million pounds. Factors that contributed heavily to such a good crop during a very stressful growing season included more intensive cultivational practices and irrigation in commercial groves. The value of the crop was $82.3 million, which makes the 1980 crop the most valuable since records began in 1919.

APPLES UP SLIGHTLY

The main effect of the dry and very hot weather on apples was to restrict sizing and retard coloring. Even with these drawbacks, production was up 1 million pounds over the 1979 crop and totaled 36 million pounds. The average price was also up slightly and added to a total value of $4.5 million, which was the highest since apple estimates were reinstated in 1976.

VEGETABLES VARIED

The extremes of weather conditions during 1980 produced a varied production pattern for vegetables with the time of planting being a key variable. Vegetable crops at critical periods of growth during the drought were hurt. One of the brighter spots was snap beans (for fresh market), which totaled 6,900 acres harvested, a 2 percent increase. These acres produced a yield that averaged 2,900 pounds per acre, as good as the 1979 crop. Production, at 19.9 million pounds, was the largest in recent years and more than offset a decline in price to lift the total value of the crop to $5.4 million. Harvested acres of cabbage decreased slightly, along with the yield, to produce a 10 percent decline in production, at 32.9 million pounds. However, a sharply higher price lifted the total value of the crop 30 percent above the 1979 value. Cantaloups also recorded a modest 3 percent increase in total value, even though both harvested acres and yield were below the 1979 level. Sharply higher prices were received. The overall value of the watermelon crop also recorded a sharp increase, thanks to a marked increase in price. Production was less due to a smaller yield. The harvested acres of tomatoes decreased by 9 percent to 2,100 acres and the yield was lower. The resulting reduction in production more than offset the price increase and the value of the crop slipped 1 percent to $4.18 million.

POULTRY AND HONEY

HIGHLIGHTS

Production of commercial broilers and hatching eggs hit a record high in 1980. However, production for all eggs, other chickens, turkeys, and honey fell below previous year levels. The decrease in egg production was due to the drop in number of layers as the number of eggs per layer increased to a record level. Turkey production fell below the record level established in 1979 but was still the second largest production of record. The number of colonies of bees was unchanged from 1979 but the average yield of honey per colony was well below the previous year. Prices received for broilers, turkeys and honey were above the previous year, but prices for spent fowl and table eggs were below the 1979 level.

The cash receipts from all chickens and eggs including broilers amounted to $906.5 million for the 1980 production year, down $3.1 million from 1979. However, Georgia still ranks first in the Nation in cash receipts from all chickens and eggs including broilers but excluding turkeys, while ranking below only California in earnings from eggs and second to Arkansas in earnings from broilers. Cash receipts from broilers produced in Georgia during 1980 were $588.8 million, up 6 percent from the $554.5 million in 1979.

BROILER PRODUCTION SETS RECORD

Georgia broiler producers sold 573.9 million broilers during 1980 for a total weight of 2.2 billion pounds. This was a 2 percent increase over the 561.3 million pounds produced in 1979 and 8 percent more than the 531.9 million pounds produced in 1978. This production kept Georgia in second place among all states in broiler production.

The number of spent fowl sold from Georgia's laying flock in 1980 totaled 23.5 million. Of these, 7.5 million were from hatching flocks and 16.0 million were from table egg flocks. A total of 597.4 million chickens and broilers were sold for slaughter in 1980, up 2 percent from 1979.

The average price received per pound for broilers in 1980 was 27 cents, up one cent from 1979. Cash receipts from Georgia produced eggs during the production year of 1980 amounted to $303.6 million, down 10 percent from the 1979 receipts.

EGG PRODUCTION DOWN

There were 5.6 billion eggs produced in Georgia during 1980, down 7 percent from 1979. During 1980, the average number of layers in Georgia was 23.2 million or 8 percent less than the 25.1 million in 1979. The average number of layers in hatching egg flocks during 1980 was 5.3 million, up 7 percent from 1979 while the average number of layers in other flocks was 17.9 million, down 11 percent from 1979. Georgia's layers produced an average of 243 eggs in 1980 compared with 242 in 1979 and 238 in 1978. Hatching egg producers sold 1.2 billion eggs during 1980, of which 71 million were sold as table eggs and 1.1 billion for hatching. Producers of table eggs sold 4.5 billion eggs during 1980 for a total of 5.6 billion eggs sold.

Sale of table eggs was 66 percent of the total cash receipts from eggs in 1980 while hatching eggs made up the other 34 percent. The average price per dozen for all eggs during 1980 was 64.7 cents. This was 1.8 cents less than the 1979 average price.

TURKEY PRODUCTION DOWN

Georgia turkey producers raised 2.4 million turkeys during 1980 or 5 percent less than the 2.5 million raised in 1979, but still the second largest number raised on record. Total production in 1980 was 54.5 million pounds, down 12 percent from the 61.9 million pounds produced in 1979.

Georgia turkey growers received $22.9 million for their turkeys in 1980, down 8 percent from 1979. The average price per pound received for turkeys in 1980 was 42.0 cents compared with 40.0 cents in 1979.

HONEY PRODUCTION DOWN

Honey produced in Georgia during 1980 amounted to 4.2 million pounds, 31 percent less than the 6.1 million pounds produced in 1979. The number of colonies in 1980 was 161,000, the same as 1979. Yield per colony at 26 pounds in 1980 was down 33 percent from the previous year. Yield per colony is low in Georgia because it represents an average of all colonies in the State. Some of the bees in Georgia are kept primarily for pollination of crops or reproducing package bees and queen bees for commercial sale.

The cash receipts from honey and beeswax for 1980 was $2.5 million, 23 percent less than the 1979 value. Honey accounted for 96 percent of the total value and beeswax the other 4 percent. The average price per pound of beeswax in 1980 was $1.86, the same as the 1979 price. The estimated value of bee sales in 1980 was $3.5 million. Queen bee sales accounted for approximately 28 percent, package bee sales 71 percent and the sale of colonies and nuclei, one percent.

There were 2,380,000 turkeys raised on Georgia farms in 1980.

LIVESTOCK AND DAIRY

HIGHLIGHTS

Unusually hot and dry weather during July through September of 1980 curtailed pasture growth and caused low conception rates and slow weight gain in hogs. Hog numbers fell during 1980 as prices declined in late summer and fall while prices of feed increased. For the entire year, the number of cattle and calves increased as fewer cattle were marketed. Producers culled less cows and held on to more replacement heifers. Georgia ranked 8th in the Nation in total hogs and pigs on December 1, 1980, 21st in total cattle and calves on January 1, 1981 and 23rd in milk produced during 1980. Georgia's dairymen, cattle and hog producers received $560.7 million from marketing during 1980. This was 28 percent less than the $684.9 million received in 1979.

CATTLE

Cattle and calves on Georgia farms totaled 1.91 million head at the beginning of 1981, 19 percent above a year earlier. Cattle cash receipts in 1980 were $146.0 million, down 53 percent from the $309.3 in 1979, due to lower prices and fewer cattle sold. The inventory was valued at $706.7 million, a 5 percent increase over the January 1, 1980 value of $672.0 million. This increase was due to the drastic rise in inventory. Value per head dropped to $370 on January 1, 1981 from $420 per head on January 1, 1980.

The 1980 calf crop of 830,000 head was 6 percent above the previous year's crop of 780,000 head.

HOGS

The State's 24,000 hog operations had 2.3 million head on hand December 1, 1980, a decrease of 3 percent from the previous year. Breeding inventory was 11 percent larger than a year earlier. Hog cash receipts were $224.7 million during 1980, up 10 percent from $204.4 million in 1979, as producers decreased inventories. The average value of hogs and pigs on hand December 1, 1980 was $66.50 per head, $20.50 above the previous year. The total value of Georgia's December 1, 1980 hog inventory was $153.0 million compared to $108.6 million a year earlier.

The State's pork producers farrowed 444,000 sows during 1980 (December 1979 through November 1980), 9,000 less than during 1979. The average pigs saved per litter was 6.97, resulting in a pig crop of 3.1 million, down 2 percent from the number saved during 1979.

MILK PRODUCTION

Georgia's dairies produced an estimated 1.367 billion pounds of milk during 1980, up 2 percent from the previous year. There was an average of 130,000 milk cows on hand during 1980, unchanged from 1979.

The annual average milk produced per cow was 10,515 pounds, 2 percent above the 10,292 pound average in 1979. Cash receipts from dairy products, at $190.0 million were up 11 percent from 1979.

RED MEAT PRODUCTION

Slaughter plants in Georgia produced 455.1 million pounds of red meat (beef, veal, pork and mutton) during 1980. This was 1 percent more than the previous year.

Beef production was down 22 percent from 1979, while pork production was up 10 percent from 1979.

NUMBER OF PRODUCERS

Counties within Federal Order No. 7 and Number of Producers by County Shipping Milk to Pool Handlers Regulated by FMO#7 during December 1980.

▤ Counties not under FMO#7. However, producers listed in these counties do supply milk to plants within the FMO#7 area. There are 56 producers in 37 counties in Federal Order No. 7 who ship to FMO#7 but are not on the map because the respective counties have less than 3 producers.

▥ Counties within Federal Order No. 7 with producers supplying milk to FMO#6 during December 1980. There are 10 producers in 10 counties in Federal Order No. 7 who ship to FMO#6 but are not on the map because the respective counties have less than 3 producers.

Counties within Federal Order No. 7 with producers supplying milk to FMO#7 and FMO#6 during December 1980. The top figure is the number of producers shipping to FMO#6 and the lower figure is the number of producers shipping to FMO#7.

FARM INCOME AND PRICES

HIGHLIGHTS

Gross farm income for Georgia farmers in 1980, at $3.0 billion, declined 7 percent from 1979 and production expenses at $3.0 billion increased 10 percent. As a result, net farm income after inventory adjustment plunged to only $41.6 million compared to $675.8 million in 1979. The 1980 net farm income was the lowest since records began in 1949.

Cash receipts from farm marketings received by Georgia farmers in 1980 dropped 9 percent to $2.7 billion. The drop in 1980 cash receipts is the largest year to year decrease since World War II.

Cash receipts from the sale of livestock, poultry and their products amounted to $1,503,310 or 55.5 percent of the total, but were 7 percent below the record level of $1,617,299 in 1979. Commercial broilers continued as the leading source of cash farm receipts continuing the trend that began in 1956. Broilers accounted for 21.8 percent of the total and were among only a few commodities registering an increase from 1979.

Cash receipts from the sale of crops, at $1,173,405, accounted for 43.4 percent of the total and were down 12 percent from 1979. Soybeans earned 8.8 percent of the total and moved ahead of peanuts which slipped to only 8.4 percent of the total. Government payments, at $28,866,000, were 61 percent above 1979 and accounted for 1.1 percent of the total.

PRICES RECEIVED BY FARMERS

Prices received by Georgia farmers for agricultural products in 1980 improved over 1979 levels. The Georgia All Commodity Index of Prices Received, at 222 percent of the 1967 base, was 8 percentage points above the level of 1979. However, prices paid for production items by farmers in 1980 also advanced to a record high level. For comparison purposes, the 1980 Annual U.S. Index of Prices Received, at 134, only advanced 2 percentage points from 1979 but the Index of Prices Paid for production items, taxes and wage rates, at 140, was up 15 points. This is a strong indication of the continued price-cost squeeze that farmers are experiencing.

Georgia prices received for field crops in 1980 were above 1979 with the exception of tobacco and wheat. The season average price for tobacco declined in 1980 to $139.50 per hundredweight, down from $141 in 1979. Wheat prices at $3.65 per bushel in 1980 were down $0.10 from $3.75 in 1979.

Prices received for most vegetable crops were up compared with 1979 prices. Melons, tomatoes, sweetpotatoes and cabbage all showed marked increases but snap beans dropped to $28.70 per hundredweight from $31.20 in 1979.

Marketing year average prices received for meat animals decreased sharply in 1980. Beef cattle dropped to $52.20 per hundredweight from $60.70 in 1979, calves dropped to $67.40 from $85.50 in 1979 and hogs dropped to $36.10 from $39.10. The average price for milk at $14 per hundredweight was above the $12.90 received in 1979.

Prices received for broilers and turkeys showed slight increases while prices for other chickens and eggs decreased.

PRICES PAID BY FARMERS

Prices paid by farmers for most commodities and services in 1980 continued to increase. Poultry feeds gradually increased throughout the year. Dairy feeds began increasing in summer months and continued throughout the year. Prices farmers paid for bran, middlings, corn meal, soybean meal and cottonseed meal were all above prices in 1979. Feeder pig prices were lower than in 1979. There were sharp advances in gasoline and diesel fuel prices in 1980 as well as for motor supplies and services. Items such as fertilizer, pesticides, farm machinery, farm supplies, building materials and baby chicks, now priced on a regional basis, were generally above 1979 prices.

Lard & Tallow (edible & inedible)	3.3	7.1	4.9	4.2	6.2	6.0	6.7	9.4
Peanuts 5/	24.1	50.2	70.0	39.7	85.6	116.9	129.5	119.7
Other	20.6	29.0	33.9	31.0	33.7	29.8	37.6	51.5
TOTAL	207.0	329.5	453.8	387.3	478.0	439.2	554.0	753.4

1/ Source: ERS, USDA; FATUS; fiscal year Oct.-Sept. 1973-1980. The export shares were derived from the contribution of the states and regions to national output. They do not show actual exports, but instead reflect the common stake of the states and regions in the national export total. 2/ Includes barley, corn, oats and sorghum grain. 3/ Included in soybeans for 1977-1980. 4/ Not shown separately for 1978-1980. 5/ Peanuts and oil for 1977-1980.

U.S. Per Capita Consumption of Poultry, Eggs, and Red Meats by Selected Years, 1960-1980 1/

Year	Eggs	Poultry, ready-to-cook weights				Red meats, carcass weight equivalent			
		Chicken							
		Commercial Broilers	Total	Turkey	Total	Beef and Veal	Pork excluding Lard	Lamb and Mutton	Total

1/ Includes available data for Alaska and Hawaii beginning in 1960.

Georgia's Rank in U.S. Agriculture: Selected Items, 1980

Item	Amount	Unit	Rank
Peanuts Produced	995,000,000	Pounds	1
Rye Planted	450,000	Acres	1
Cash Receipts from Eggs, Broilers and Chickens	1/906,471,000	Dollars	1
Pecans Produced	105,000,000	Pounds	1
Broilers Produced	1/2,180,816,000	Pounds	2
Eggs Produced	1/5,637,000,000	Number	2
Rye Produced	1,995,000	Bushels	2
Peanuts, Yield per Acre	1,990	Pounds	3
Peaches (Utilized Production)	120,000,000	Pounds	3
Watermelons Produced	2,590,000	Cwt.	4
All Tobacco Produced	110,550,000	Pounds	5
Sweetpotatoes Produced	480,000	Cwt.	5
Snapbeans Produced (Fresh Market)	199,000	Cwt.	6
All Hogs and Pigs (Dec. 1, 1980)	2,300,000	Number	8
Pigs Born	1/1,680,000	Number	8
White Corn Produced	720,000	Bushels	9
Upland Cotton Produced	86,000	Bales	12
Cabbage Produced	329,000	Cwt.	13
Soybeans Produced	25,680,000	Bushels	16
Hogs Slaughtered	2,276,700	Number	16
Tomatoes Produced (Fresh Market)	162,000	Cwt.	16
Commodities Export Values	753,400,000	Dollars	17
Corn Produced for Grain	54,600,000	Bushels	18
Beef Cows (Jan. 1, 1980)	747,000	Number	18
Farms	59,000	Number	18
All Wheat	19,800,000	Bushels	20
Calves Born	830,000	Number	22
Milk Cows (Jan. 1, 1980)	130,000	Number	22
Land in Farms	15,500,000	Acres	23
Milk Produced	1,367,000,000	Pounds	23
Grain Storage Capacity (Jan. 1, 1981)	66,860,000	Bushels	23
Apples (Utilized Production, 1980)	36,000,000	Pounds	25
Cattle Slaughter	201,200	Number	26
All Cattle & Calves (Jan. 1, 1980)	1,600,000	Number	27
Corn Silage Produced	880,000	Tons	29
All Hay Produced	736,000	Tons	36

Georgia's Share of the U.S. Total: Selected Items, 1980

Item	U.S. Production	Unit	Percent
Pecans Produced	183,500,000	Pounds	57.2
Peanuts Produced	2,296,250,000	Pounds	43.3
Cash Receipts from Broilers 2/	1/4,303,719,000	Dollars	13.7
Rye Produced	16,265,000	Bushels	12.3
Cash Receipts from Broilers, Eggs and Chickens	1/7,681,228,000	Dollars	11.8
Cash Receipts from Eggs	3,247,620,000	Dollars	9.3
All Tobacco Produced	1,772,001,000	Pounds	6.2
Peaches Produced	3,073,600,000	Pounds	3.9
Commodities Export Values	40,480,500,000	Dollars	1.9
Soybeans Produced	1,817,097,000	Bushels	1.4
Corn Produced for Grain	6,647,534,000	Bushels	.8

1/ Based on December 1, 1979-November 30, 1980 marketing year. 2/ Includes home consumption.

By Hour Receiving Cash Wages Only	2.73	2.93	2.79	3.00	2.87	2.89	2.79	3.07	3.65	3.18	3.18	3.09	3.77	3.69

1/ Includes as "other family" only those household members working 15 hours or more per week without receiving cash wages. 2/ Separate wage rates for field and livestock workers are not available prior to July 1977. Only separate rates are available for July 1978 forward. 3/ Insufficient data for this category - data included in all hired farm workers. 4/ Prior to July 1976, wages listed are for maintenance and bookkeeping workers only. 5/ Method of payment by hour may include room and board, housing, meals or food, other items or wages only. 6/ Cash wages only but method of payment may be by hour, day, week, month or piece rate.

1978 CENSUS OF AGRICULTURE

U.S. Census of Agriculture, 1978

The preceding pages of this publication consist of information gathered and prepared by the Georgia Crop Reporting Service. The following pages contain selected data from the 1978 Census of Agriculture with comparisons to data from earlier censuses. These data are included in this publication because of the lack of comparable data and the number of requests received for such data series.

Censuses prior to 1969 were conducted by direct enumeration and found to be less and less complete. Thus, beginning with 1969, the Census was conducted primarily by mail; however, complete coverage was still not obtained as the lists used to create the Census mailings were not adequate. The 1978 Census of Agriculture was supplemented by an area segment sample which provided estimates of the number and characteristics of any farms not represented in the mail survey. This estimate of incompleteness is an integral part of the 1978 state totals but have not been allocated to county totals. Thus, state totals for 1978 are not directly comparable with totals for 1974 or earlier censuses as they include data for farm operations represented on the mail list plus estimates from the direct enumeration sample for farms not represented on the mail list. The 1978 total figure, however, would be more accurate and closer to the actual universe because of the incompleteness estimate. Earlier censuses made no such allowances.

The current definition of a farm, for statistical purposes, is any place from which $1,000 or more of agricultural products were sold or normally would have been sold during the year. The definition used for the 1959, 1964 and 1969 Censuses, and for the 1974 preliminary county reports, a farm was defined as any place with less than 10 acres from which $250 or more of agricultural products were sold or normally would have been sold during the year, or any place of 10 acres or more from which $50 or more of agricultural products were sold or normally would have been sold.

Effect of Definition Change for Selected Items, 1974-1978

Item	Definition Used for 1974 and 1978		Definition Used for 1959, 1964 and 1969	
	1974	1978	1974	1978
All Farms, Number	54,911	58,648	59,082	70,649
Farms with Sales less than $2500, Number	19,790	19,762	23,208	2/31,777
Land in Farms, Acres	13,878,294	13,742,485	14,141,870	2/14,306,448
Total Cropland, Acres	6,475,079	6,977,959	6,527,979	2/7,123,702
Harvested Cropland, Acres	4,161,205	4,748,175	4,164,249	2/4,772,610
Value of Agricultural Products Sold, $1,000	1/1,859,780	2,393,268	1/1,860,551	2,396,130
Crops, $1,000	849,543	923,702	849,773	2/926,080
Livestock, Poultry & Products, $1,000	976,488	1,469,566	977,011	2/1,479,108
Cattle & Calves Inventory, Number	2,022,904	1,616,992	2,029,669	2/1,640,149
Hogs & Pigs Inventory, Number	1,243,255	1,687,613	1,245,028	2/1,691,886
Chickens 3+ months old Inventory, Number	25,591,146	30,640,902	25,599,204	31,007,738

1/ 1974 data include sales of forest products. 2/ Data are from preliminary reports and may differ slightly from final counts.

This chart shows how information flows through the Department's Statistical Reporting Service from the sources to the people who use it. The government's official agricultural estimates are based on reports from a cross-section of farmers and people who do business with farmers. They are checked against the complete enumerations made every five years by the Bureau of the Census, and against the reports of buyers, processors and carriers of farm products, whose operations are a measure of farm production. Besides their immediate usefulness to farmers and the general public, these estimates provide basic data required for analysis of farm income, prices, costs, parity price determinations, and prospective demand and prices for farm products.
